

HACIENDA

Blockchain technology in country real estate.

Good day, my name is Zdanovich Vitali, and I am the founder of the Hacienda project.
Allow me to share our project for you.

Idea project

The main idea of the project is to construct country real estate and rent it out worldwide, using blockchain technology.

All real estate properties will have an efficient system for generating electricity and distributing it to small-scale mining farms with immersion/water cooling. This will allow effectively use of heat generated by the mining equipment, thereby heating the rented real estate properties.

Business model

- **Rental property**

Country houses for rent for vacation and events will allow you to get up to 20% per year. Each country has its own rate of return.

- **Mining**

Installation of mining equipment with immersion/water cooling technology in Hacienda Project properties acts as an additional source of income and as a heating system for the properties. We expect 25% profitability from mining.

- **NFT & DAO**

Owners of our NFTs will receive a discount of up to 30% on the rental of the project's countryside properties. NFTs will have a "5% Royalty" which will provide additional liquidity to the token and support the Hacienda project referral system. Also, they will have the unique ability: to decide on the further development of the project by voting.
